Netherlands	€70 million	€63 million	+11%	€16 million	
UK	€33 million	(€8 million)	NA	€72 million	
Others	€17 million	€6 million	+183%	€7 million	

¹ Impact investments are defined as investments that meet minimum financial return requirements, but which also deliver specific social and/or environmental benefits.

² Excludes separate green or SRI funds managed by AIFMC in China.

³ Does not include impact of share buy-backs.

⁴ Aegon's final dividend for 2017 is subject to approval by the company's General Meeting of Shareholders, due to take place in May 2018. Calculation reflects IFRS accounting of the inventory effects of share repurchases relating to dividends paid in shares. Figures include both interim and final dividends for each year.

⁵ Please note there is often no direct correlation between tax on earnings for any given year and amounts paid or received in tax. Part of the explanation for this is that certain tax-deductible items are not recognized in the company's profit & loss statement but directly in equity. Amounts may also include payments from other years. Negative amounts denote credits or amounts received from relevant tax authorities.

Natural capital⁶

	2017	2016	Change	2015	Reference: GRI Standards
Total CO ₂ emissions (gross, metric tons)	59,491	69,213	-14%	68,283	305-2
Total CO ₂ emissions (net, metric tons)	50,295	60,193	-16%	57,679	305-2
CO ₂ emissions/employee (net, metric tons) ⁷	2.7	3.0	-10%	2.8	305-4

⁶ Gross figure for emissions excludes effect of renewable energy purchased in the UK and Netherlands. Renewable energy accounts for just over 26% of Aegon's total energy consumption. Under the Greenhouse Gas Protocol guidelines for Scope 2 emissions, net CO₂ emissions are calculated using the market-based method, while gross emissions are calculated using the location-based method. Emissions by employees are weighted by revenue and cover workforce in US, UK, Netherlands and at Aegon's asset management business only. Please note that Aegon has been carbon neutral since August 2016 (by reducing emissions from the company's own operations and supporting offset projects in China, India and Turkey. The offset projects were selected in cooperation with NGO ClimateCare). The significant decrease in emissions in 2017 was due mainly to reductions in business operations.

⁷ Please note that figures for CO₂ emissions per employee for 2015 and 2016 have been restated following a reassessment of employee numbers for these years.

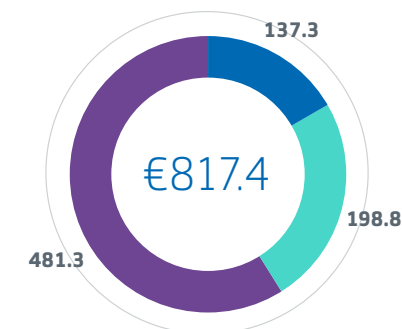

Taxes borne by Aegon (by country, in € million)

Please note that, in chart above, negative numbers indicate credit or amounts received from relevant tax authorities. Numbers may not add due to rounding.
